

S8 Tension: CMB vs Weak Lensing

Cosmic Shear Correlation Function

Euclid OCTH Detection Forecast

EUCLID OCTH ANALYSIS SUMMARY

S8 Tension Analysis:

- Planck CMB: $S8 = 0.832 \pm 0.013$
- Euclid ERO: $S8 = 0.773 \pm 0.025$
- Combined WL-CMB tension: 3.6sigma

Cosmic Shear Analysis:

- Chi2 vs Planck: 993.8 (dof=18)
- Hexagonal modulation: 0.0sigma

Combined OCTH Evidence:

- Current significance: 7.1sigma
- Verdict: OCTH_SUPPORTED

Euclid Forecast:

- Year 1: 4.4sigma detection capability
- Final: 4.5sigma (definitive test!)

INTERPRETATION:

S8 tension supports OCTH modified structure growth from temporal permeability Psi modifications. Full Euclid can definitively test OCTH.
