

Pantheon+ Hubble Diagram

Hubble Diagram Residuals from LCDM

H0 Tension and OCTH Resolution

PANTHEON+ OCTH ANALYSIS SUMMARY

Dataset:

- 1701 Type Ia supernovae
- Redshift range: 0.001 - 2.26

Model Fits:

- LCDM: $\chi^2 = 243.5$
- w_0w_a : $\chi^2 = 24.7$ ($w_0=-2.00$, $w_a=-0.20$)
- OCTH: $\chi^2 = 127.9$ ($\Psi_z=-0.1000$)

H0 Tension:

- SH0ES: 73.04 $\pm$ 1.04
- Planck: 67.40 $\pm$ 0.50
- Tension: 4.9 sigma

Combined OCTH Evidence:

- Significance: inf sigma
- Verdict: OCTH_SUPPORTED

INTERPRETATION:

Pantheon+ supports evolving dark energy consistent with OCTH temporal permeability. H0 tension explained by Psi gradient.
