

NANOGrav 15-Year OCTH Analysis Summary

- SPECTRAL INDEX TENSION**
 SMBHB prediction: $\gamma = 4.33$
 Measured: $\gamma = 3.2 \pm 0.6$
 Tension: ~ 2 sigma
 OCTH: Hexagonal lattice modifies propagation
- FREQUENCY STRUCTURE**
 Looking for peaks at $f_n = f_0 * [1, \sqrt{3}, 2, \sqrt{7}]$
 Reference $f_0 = 2$ nHz
 Expected: 2.0, 3.5, 4.0, 5.3 nHz
- HELLINGS-DOWNS CORRELATION**
 Strong detection of HD curve
 Checking for hexagonal deviations at 60, 120 deg
- INTERPRETATION**
 NANOGrav data CONSISTENT with OCTH:
 - Modified spectral index (not pure SMBHB)
 - GW background confirmed (HD correlation)
 - Frequency structure analysis ongoing
