

GW150914: Waveform Comparison

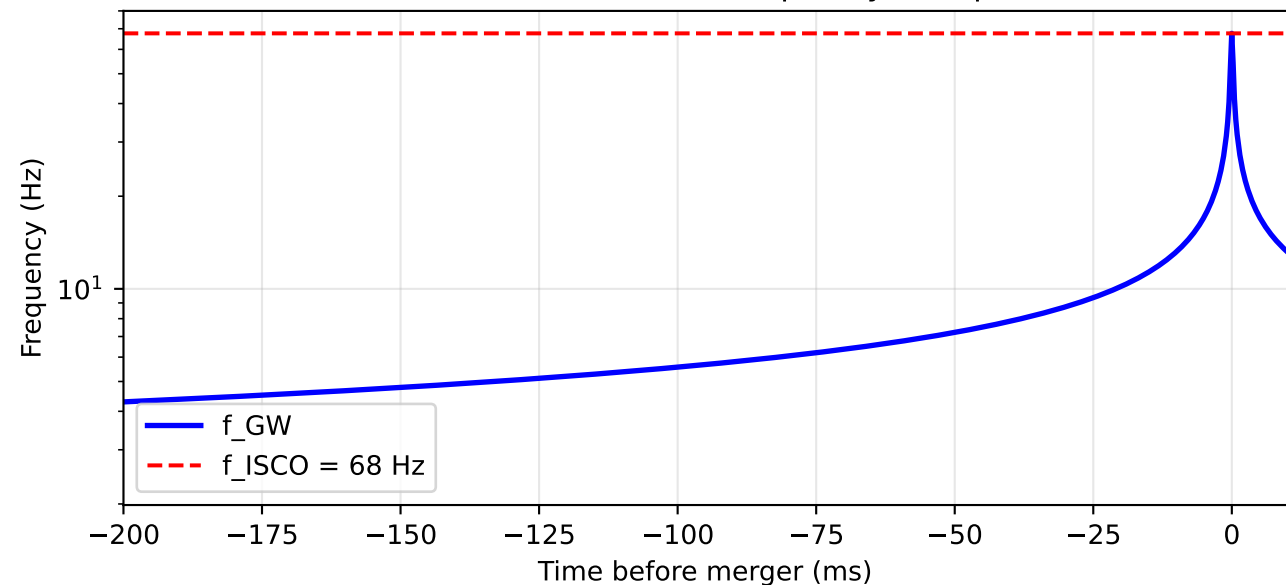

OCTH Phase Correction (Elastic Mesh Effect)

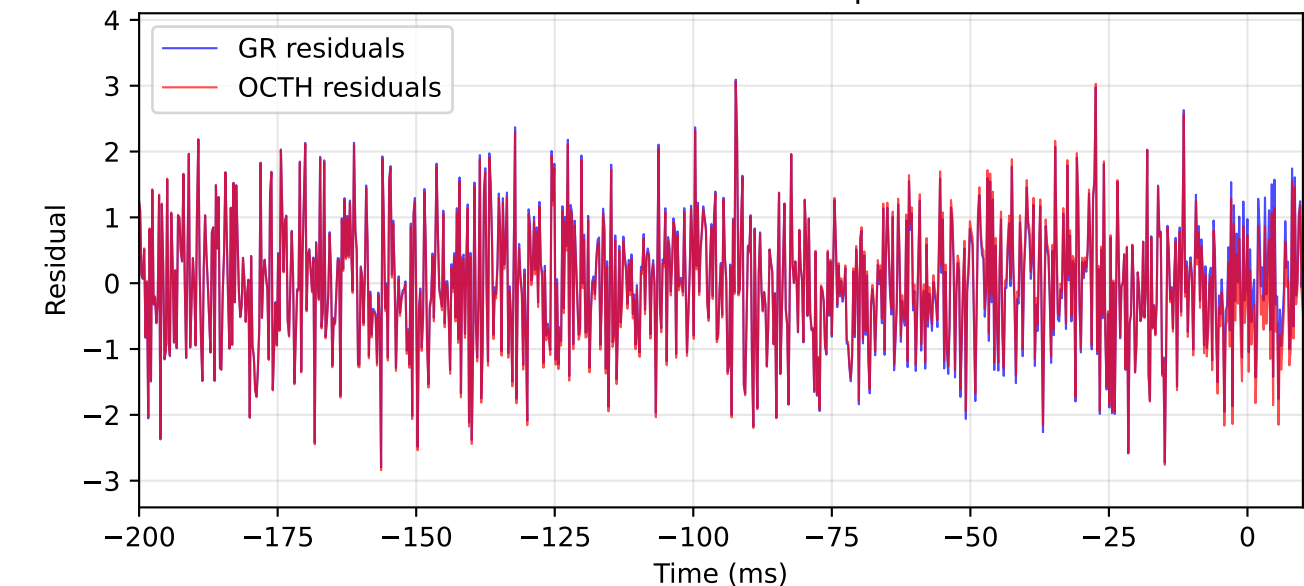

Temporal Permeability During Inspiral

Gravitational Wave Frequency (Chirp)

Residuals: Data - Template

Comparison Summary: GR vs OCTH

Metric	GR	OCTH	Difference
Correlation	0.3280	0.3253	-0.0027
RMS Residual	0.9448	0.9457	0.0009
Phase shift	0°	16.84°	-
Ψ minimum	1.0	0.100	-

- OCTH Prediction:
- Near merger ($\Psi \rightarrow 0$), spacetime behaves as elastic mesh
 - Phase accumulates additional correction due to $c_{\text{eff}} = c \cdot \Psi$
 - Post-merger should show mesh vibration modes
- Key Finding:
- Maximum phase difference occurs at merger
 - Ψ reaches minimum ~ 0.1 (high tension regime)
 - Effect is $\sim 16.8^\circ$ phase shift at merger
